

Contents

Executive Summary	3
Overall Conclusions	6
Contents	7
1 Introduction and Background	11
1.1 Introduction	11
1.1.1 The structure of the report	11
1.1.2 Energy use in the present and future building stock	12
1.1.3 Building insulation and future low energy buildings	13
1.2 Previous studies	14
1.3 The market for insulation products	15
1.4 Regulations	17
1.4.1 The Danish Building regulations	17
1.4.2 The Danish Standard DS 418 6. Edition	18
1.5 Properties and fitness for use	18
1.5.1 Fitting	19
1.5.2 Dimensional stability	20
1.5.3 Moisture	20
1.5.4 Durability	20
1.5.5 Resistance to biological attack	20
1.5.6 Indoor climate	21
1.5.7 Fire properties	22
1.5.8 Insulation properties	23
1.6 Use phase energy savings	23
2 Goal and Scope Definition	25
2.1 Goal definition	25
2.2 Scope definition	25
2.3 Functional unit	26
2.4 System boundaries	27
2.4.1 Stone wool	27
2.4.2 Flax	27
2.4.3 Paper wool	29
2.4.4 Common system boundaries and elements	30
2.4.4.1 Energy consumption	30
2.4.4.2 Packaging	30
2.4.4.3 Transportation	31
2.4.4.4 Installation, use and dismantling	31
2.4.4.5 Dismantling and disposal of post-consumer insulation waste	33
2.5 Allocation procedures	34
2.6 Impact assessment	35
2.7 Data format and quality	36
2.7.1 Data format	36
2.7.2 Data quality	36
2.7.3 Inventory inconsistencies	38
2.8 Assumptions and limitations	39
2.8.1 Assumptions	39
2.8.2 Limitations	39
2.9 Critical review process and reporting	40
2.9.1 Critical review process	40
2.9.2 Reporting of the study	40

3	Stone Wool	41
3.1	General inventory considerations	41
3.1.1	The stone wool product	41
3.1.2	Co-product allocation	42
3.2	Briquette production	42
3.2.1	Extraction of stone raw materials	43
3.2.2	Acquisition of waste materials	43
3.2.3	Transportation of briquette raw materials	43
3.2.4	Briquette production – overview	44
3.3	Binder production	44
3.3.1	Phenol	45
3.3.2	Ammonia and urea	46
3.3.3	Formaldehyde	46
3.3.4	Hydrated lime	46
3.3.5	Ammonium hydrogen carbonate	47
3.3.6	Silane	47
3.3.7	Binder production – overview	47
3.4	Blast furnace oven – spinning chamber – curing – cooling – cutting	47
3.4.1	Impregnation oil	48
3.4.2	Oven maintenance	48
3.4.3	Production waste	49
3.5	Packaging	49
3.6	Distribution	50
3.7	Installation, use and demolition	50
3.7.1	Packaging waste management	50
3.8	final disposal	51
3.8.1	Re-use of stone wool	51
3.8.2	Recycling of stone wool	51
3.9	Overall data quality	51
3.10	Inventory overview	51
3.11	Impact assessment	54
3.12	Sensitivity analysis	54
4	Flax	57
4.1	The market for flax	57
4.2	General inventory considerations	59
4.2.1	The examined product(s)	59
4.3	Flax growing – production of fibers	59
4.3.1	Input of seeds	60
4.3.2	Input of fertilizer	60
4.3.2.1	Energy consumption in fertilizer production	61
4.3.3	Crop protection – Input of pesticides and herbicides	61
4.3.3.1	Gras weed killer – properties of Fusilade X-tra	62
4.3.3.2	Broad-leaved killer – properties of Ally	62
4.3.3.3	Other pests	63
4.3.3.4	Energy consumption in pesticide production	63
4.3.4	Drying	63
4.3.5	Flax yield	63
4.3.6	Input of energy	65
4.3.6.1	Input of energy for production of machinery	65
4.3.6.2	Input of fuels for machinery (direct energy use)	67
4.3.6.3	Total energy input	67
4.4	System expansion or economic allocation?	68
4.4.1	System expansion	68
4.4.1.1	Production of linseeds	68

4.4.1.2	Production of cattle fodder	69
4.4.2	Economic allocation	69
4.4.3	Inventory results for farming activities	70
4.4.4	Discussion	72
4.5	Production of flax insulation mats	73
4.5.1	Polyester	73
4.5.2	Diammonium hydrogen phosphate (DAP)	73
4.5.3	Borax	74
4.5.4	Energy consumption	74
4.6	Packaging	74
4.7	Distribution	74
4.8	Installation, use and dismantling	74
4.8.1	Packaging waste management	74
4.9	Final disposal	75
4.9.1	Reuse of flax insulation	75
4.9.2	Recycling of flax insulation	75
4.9.3	Landfilling of flax insulation	75
4.9.4	Incineration of flax insulation	75
4.9.5	Choice of waste management scenarios	76
4.10	Data quality assessment	76
4.11	Inventory results	77
4.12	Impact assessment	77
4.13	Sensitivity analysis	77
4.13.1	Overview	77
4.13.2	Importance of final disposal	80
4.13.3	System expansion or economic allocation	80
4.13.4	Omission of nitrogen leaching in flax growing	80
4.14	Alternative production	81
4.14.1	Conclusions from the sensitivity analysis	81
5	Paper Wool	83
5.1	The life cycles of newsprint	83
5.1.1	The market for pulp, paper and board	85
5.1.2	The market for recycled paper	86
5.1.3	Conclusions	88
5.2	The flow of materials in the life cycle of paper wool	89
5.2.1	Paper fibers	89
5.2.2	Borax and boric acid	91
5.2.3	Aluminium hydroxide	92
5.3	Production of paper wool insulation	92
5.4	Transportation	92
5.5	Packaging	93
5.6	Installation, use and dismantling	93
5.7	Final disposal	94
5.7.1	Re-use and recycling of paper wool	94
5.8	Data quality assessment	94
5.9	Inventory results	95
5.10	Impact assessment	97
5.11	Sensitivity analysis	98
6	Health Aspects	100
6.1	Background	100
6.2	Risk assessment principles	100
6.3	Exposures to fibers	101
6.3.1	Exposure levels	101

6.3.2	Indoor air	102
6.4	Adverse effects	102
6.4.1	Stone (rock) wool	102
6.4.2	Paper wool (Cellulose shredded paper)	104
6.4.3	Flax cellulose	104
6.4.4	Additives	104
6.5	Comparative risk assessment of the three products	105
6.6	Occupational health in LCA	106
7	Comparison	107
7.1	Global warming	109
7.2	Acidification	110
7.3	Nutrient enrichment	111
7.4	Photochemical ozone formation	112
7.5	Generation of solid waste	113
7.5.1	Non-hazardous waste	113
7.5.1.1	Conclusion – non hazardous waste	114
7.5.2	Hazardous waste	114
7.5.2.1	Conclusion hazardous waste	115
7.5.3	Conclusions waste	115
7.6	Energy consumption	116
7.6.1	Total primary energy consumption	116
7.6.2	Consumption of fossil fuels	116
7.6.3	Consumption of renewable fuels	118
7.6.4	Electricity consumption	118
7.6.5	Consumption of fossil fuels	119
7.7	Water consumption	120
7.8	Health aspects	120
7.9	Final conclusions	121
Appendix 1 – Waste Management		124
	Insulation waste	124
	Future scenarios	125
	Inventory data – waste disposal	126
	Packaging waste	130
	Wooden pallets	130
	LDPE-film	130
	Conclusions	131
Appendix 2 – Glossary of Terms and Acronyms		132
Appendix 3 – Critical Review Process		134
	Review of the first draft report	134
	Scope and purpose of review	134
	Overall view	134
	Substantive comments	135
	Specific comments	136
	Report comments	139
	ISO LCA Standards compliance	140
	Reply to the review	140
	Substantive comments	140
	Specific comments	141
	Report comments	142
	Critical reviewers' response to review comments and report amendments	143
	General Remarks	143
	Specific Points	143
	The authors' final response to the critical review	144
